Jainam Shah – 202512012

Jay Shah – 202512059

Priya J Shah – 2025120100

Priya D Shah – 2025120105

PROJECT DESCRIPTION:

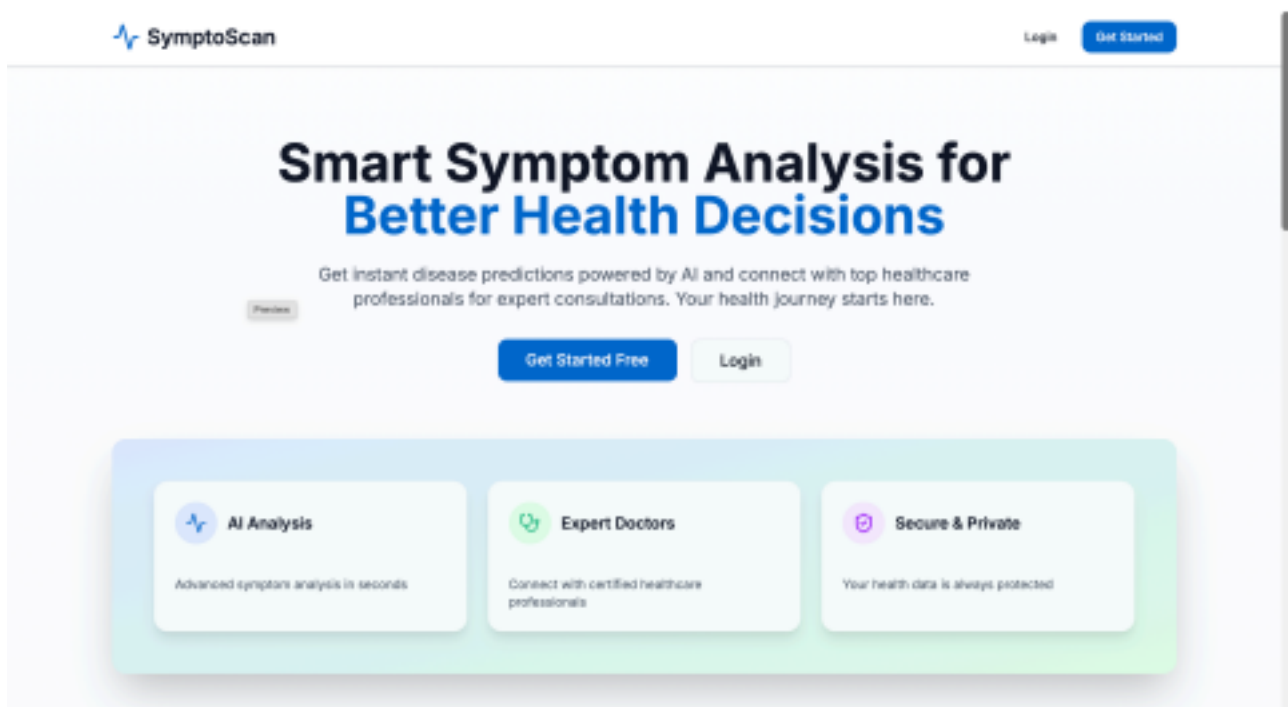

SymptoScan is a web-based, AI-powered healthcare platform designed to assist users in identifying possible diseases based on their symptoms and obtaining appropriate medical guidance. The system provides a structured and user-friendly environment where visitors can explore healthcare information, understand common symptoms, and learn about preventive care without logging in.

Registered users can actively interact with the platform by entering symptoms, receiving AI-based disease predictions, viewing precautionary measures, and booking consultations with doctors. The system also maintains user health history for better tracking and personalized recommendations.

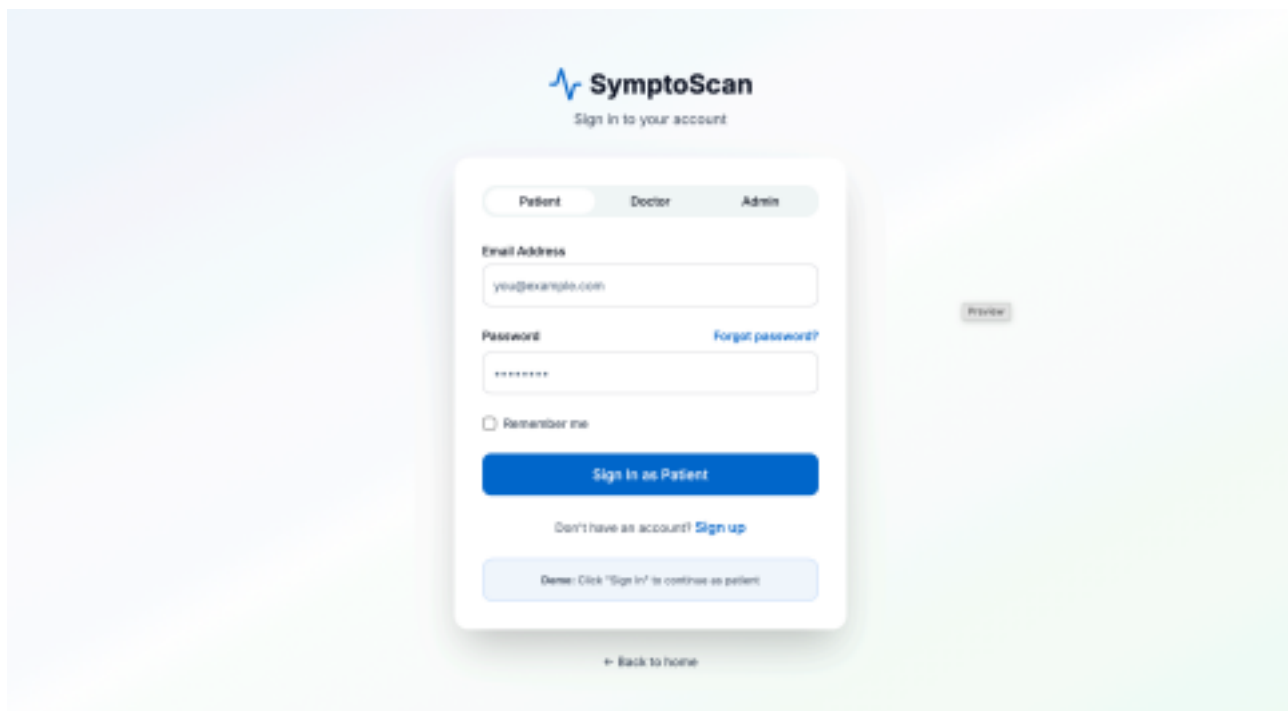

All doctor profiles and medical content are verified and approved by the administrator before publication to ensure reliability and trustworthiness. The platform follows role-based access control for visitors, registered users, doctors, and administrators. Administrative features include managing doctors, moderating medical content, overseeing appointments, and maintaining system integrity.

SymptoScan aims to promote early health awareness, accessible medical guidance, and reliable digital healthcare support through intelligent prediction and structured consultation services.
