■ Textual

1. Register Account

- Actor: Patient / Doctor
- Description: New users create an account on the platform using email and password. Doctors can also register with specialization details.
- Precondition: User is not already registered.
- Postcondition: Account is created successfully and stored in database.
- Flow: Open Register Page → Enter Details → Validate Input → Save Account → Redirect to Login

2. Login to System

- Actor: Patient / Doctor / Admin
- Description: Registered users log in securely using credentials.
- Precondition: User account exists.
- Postcondition: User is authenticated and redirected to role-based dashboard.
- Flow: Open Login Page → Enter Email & Password → Authenticate → Dashboard

3. View Dashboard

- Actor: Patient / Doctor / Admin
- Description: Displays personalized dashboard according to user role.
- Precondition: User logged in.
- Postcondition: Dashboard data shown.
- Flow: Login Success → Fetch User Data → Load Dashboard

4. Select Symptoms

- Actor: Patient
- Description: Patient selects symptoms from categorized symptom list.
- Precondition: Patient logged in.
- Postcondition: Symptoms prepared for prediction.
- Flow: Open Symptoms Page → Select Symptoms → Submit

5. Predict Disease

- Actor: Patient
- Description: System uses trained machine learning model to predict disease based on selected symptoms.
- Precondition: Symptoms selected.
- Postcondition: Disease result generated with confidence score.
- Flow: Submit Symptoms → ML Model Process → Return Prediction

6. View Prediction Result

- Actor: Patient

- Description: Displays predicted disease, confidence percentage, and precautions.
- Precondition: Prediction completed.
- Postcondition: Result visible to patient.
- Flow: Receive Prediction → Show Disease Name → Show Confidence

7. Save Prediction History

- Actor: Patient
- Description: Stores prediction result for future reference.
- Precondition: Prediction generated.
- Postcondition: History updated in database.
- Flow: Prediction Success → Save Record → Update History

8. View Prediction History

- Actor: Patient
- Description: Patient can view all previous disease predictions.
- Precondition: Patient logged in.
- Postcondition: Prediction history displayed.
- Flow: Open History Page → Fetch Records → Display Results

9. View Doctors List

- Actor: Patient
- Description: Displays available doctors with specialization, fee, and status.
- Precondition: Patient logged in.
- Postcondition: Doctor list displayed.
- Flow: Open Doctor Page → Fetch Doctors → Show Cards

10. Request Consultation

- Actor: Patient
- Description: Patient selects doctor and requests consultation.
- Precondition: Doctor available.
- Postcondition: Consultation request created.
- Flow: Select Doctor → Click Consult Now → Create Request

11. Make Payment

- Actor: Patient
- Description: Patient pays consultation fee through Razorpay gateway.
- Precondition: Consultation request created.
- Postcondition: Payment verified successfully.
- Flow: Open Payment Window → Pay Fee → Verify Payment

12. Start Chat Session

- Actor: Patient / Doctor

- Description: Secure consultation chat opens after successful payment.
- Precondition: Payment completed.
- Postcondition: Chat session active.
- Flow: Payment Success → Open Chat → Start Messaging

13. Auto Doctor Bot Reply

- Actor: System
- Description: Automated bot replies to first few patient messages instantly.
- Precondition: Chat session active.
- Postcondition: Bot response displayed.
- Flow: Patient Sends Message → Generate Auto Reply → Show Response

14. Doctor Manage Consultation

- Actor: Doctor
- Description: Doctor accepts requests, views patient history, and replies in chat.
- Precondition: Doctor logged in.
- Postcondition: Consultation handled.
- Flow: Open Dashboard → View Requests → Accept → Reply

15. Give Feedback

- Actor: Patient
- Description: Patient rates doctor and provides consultation feedback.
- Precondition: Consultation completed.
- Postcondition: Feedback saved.
- Flow: Open Feedback Form → Submit Rating → Save

16. View Admin Dashboard

- Actor: Admin
- Description: Admin monitors users, doctors, predictions, consultations, and revenue.
- Precondition: Admin logged in.
- Postcondition: Dashboard statistics shown.
- Flow: Login → Open Dashboard → View Reports

17. Manage Users

- Actor: Admin
- Description: Admin can activate, deactivate, edit, or remove users.
- Precondition: Admin logged in.
- Postcondition: User records updated.
- Flow: Open Users Panel → Select User → Perform Action

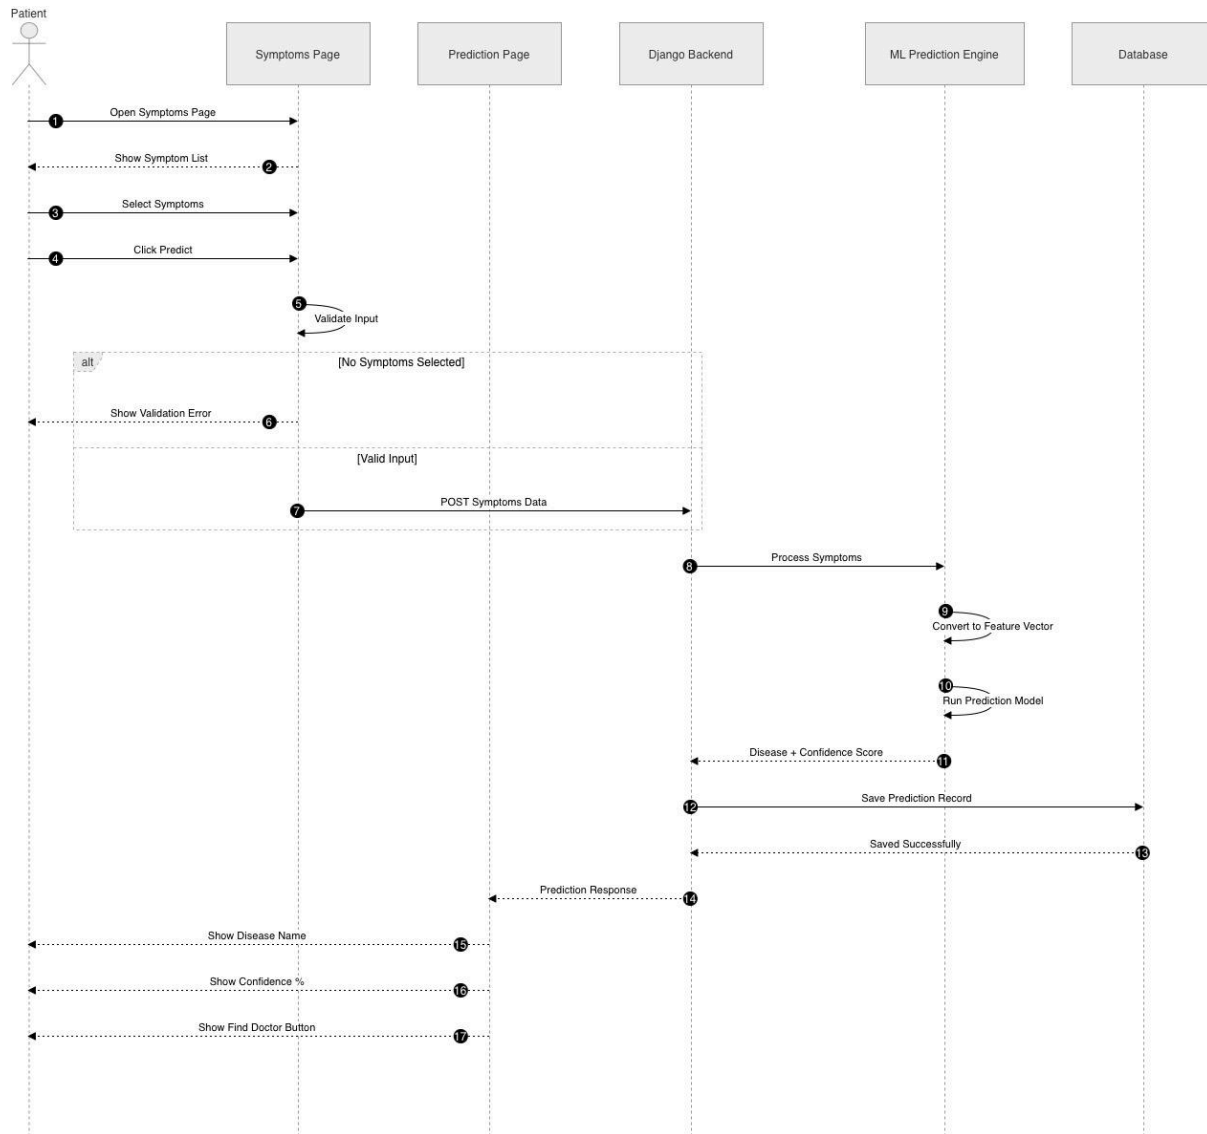

18. View Revenue Report

- Actor: Admin
- Description: Displays total consultation earnings collected through payments.
- Precondition: Payment records exist.
- Postcondition: Revenue report shown.
- Flow: Open Revenue Section → Calculate Total → Display Amount

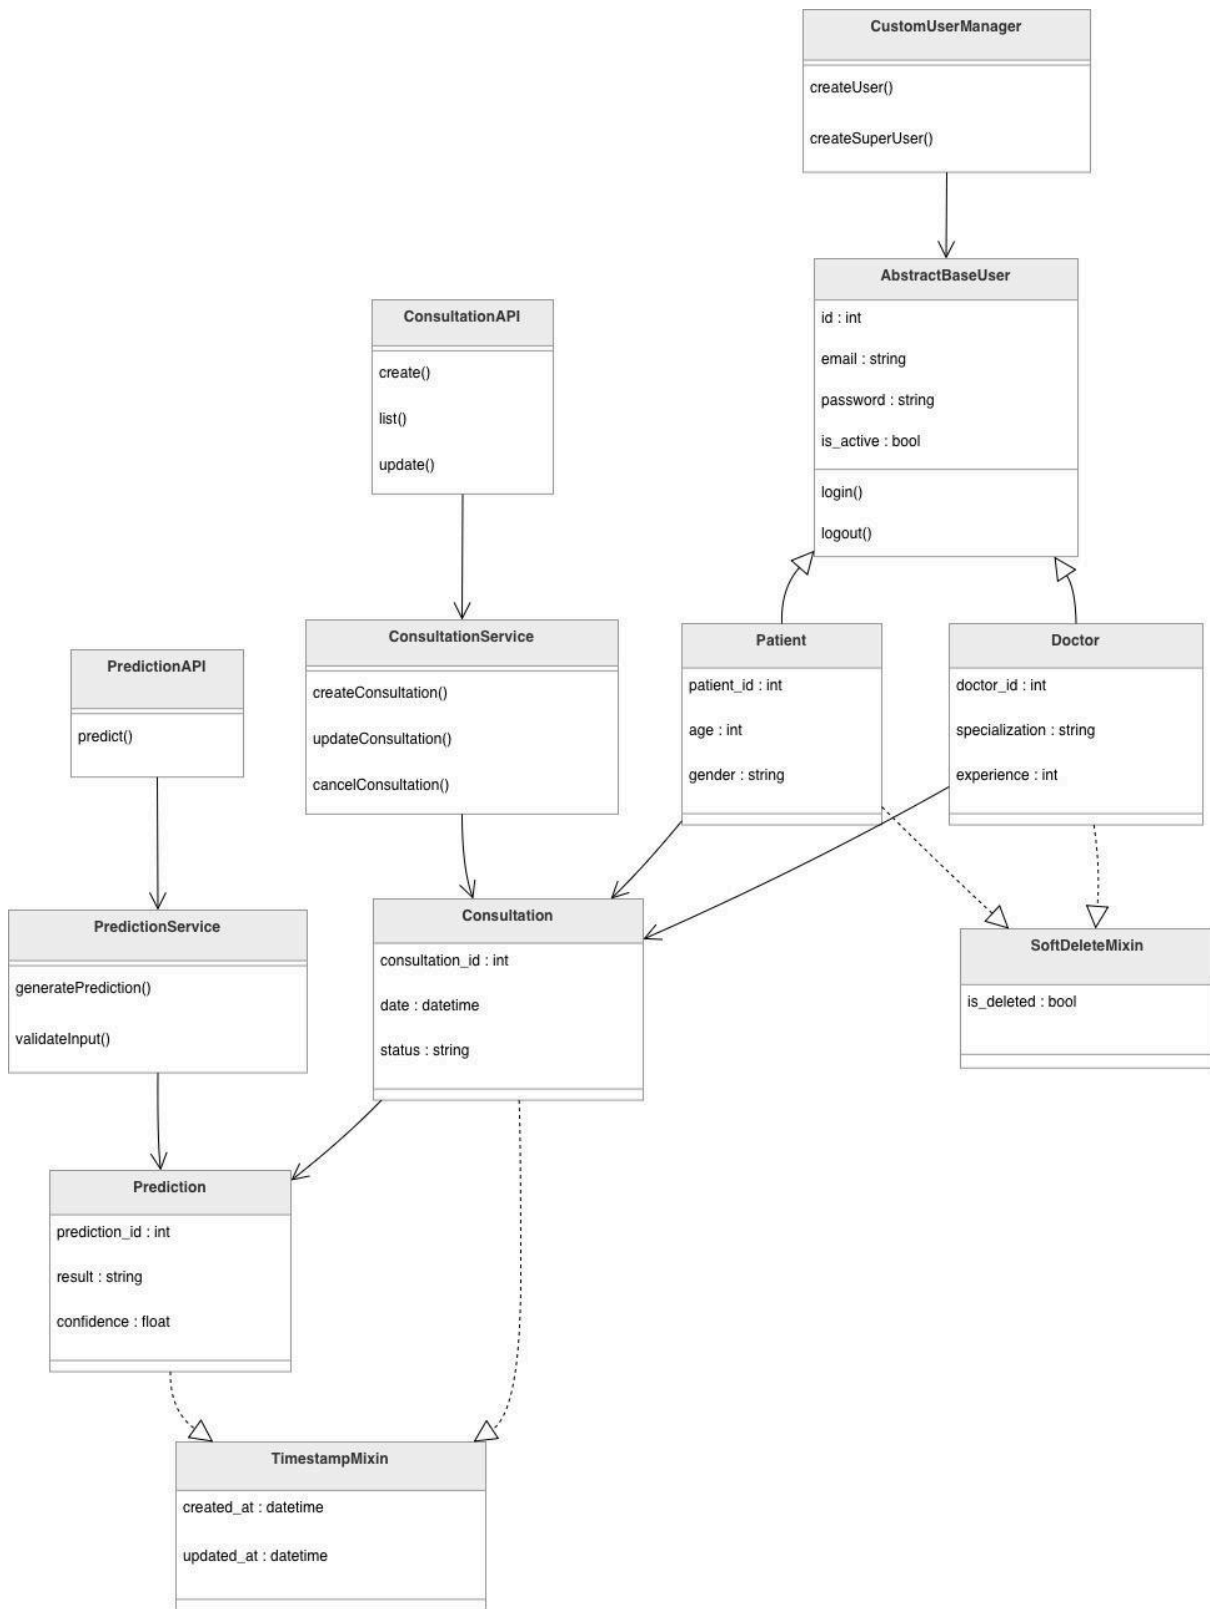

19. Logout

- Actor: Patient / Doctor / Admin
- Description: User securely logs out of system.
- Precondition: User logged in.
- Postcondition: Session ended.
- Flow: Click Logout → Clear Session → Redirect to Login
